About the Guam Waterworks Authority (GWA)

Guam Waterworks Authority (GWA) is a public authority governed by the Consolidated Commission on Utilities (CCU). They are subject to the regulations of the Guam Public Utilities Commission (PUC). GWA provides water to all of the civilian population of Guam. They also provide sewer service to a large percentage of the civilian population, Andersen Air Force Base and several smaller United States Navy facilities. During FY2019, GWA served an average of 42,538 water customers and 29,332 wastewater customers.

GWA’s water supply consists of 120 wells, one active production spring, one “Maui” well, 27 booster pump stations, 23 reservoirs/tanks in service, 586 miles of water distribution lines, and approximately 3,814 fire hydrants, all in the agency’s effort to provide more efficient and reliable service to its customers while meeting regulatory requirements.

GWA’s wastewater system consists of 310 miles of gravity sewer network, 77 sewer pump stations, approximately 27 miles of force main and five wastewater treatment plants and associated outfalls.

GWA has undergone significant transformation over the last several years by working to improve the management and operations, including decreasing expenditures, decreasing leak repair times, implementing a meter replacement program and launching a computerized maintenance management system, which have all contributed to significantly improved operating results since FY2011.

VISION

To be a world class provider of water and wastewater services.

MISSION

We will provide outstanding customer service by delivering excellent water and wastewater services in a safe, reliable, responsible and cost effective manner.

LOCATIONS

Gloria B. Nelson Public Service Bldg.
688 Route 15 Fadian
Mangilao, Guam 96913
Hours: Mon-Fri | 7:00 a.m. to 5:00 p.m.

Upper Tumon
561 North Marine Corps Drive
Upper Tumon, Guam 96911
Hours: Mon-Fri | 7:30 a.m. to 6:00 p.m.; Sat | 9:00 a.m. to 1:00 p.m.

Julale Shopping Center
424 West O’Brien Drive
 Hagåtña, Guam 96931
Hours: Mon-Fri | 8:00 a.m. to 5:00 p.m.

ISSUED JULY 2020
Capital Assets

The Authority had about $617 million invested in broad range of utility capital assets as of September 30, 2019. The investment in capital assets includes building improvements, water treatment plants, water transmission and distribution mains, sewer lines, water reservoirs, pump stations, wastewater treatment facilities, deep wells, meter replacements, fire hydrant replacements, machinery and equipment as shown in Table below identified by text color (Water Projects are in Blue, Wastewater in Green and all others in Purple).

In FY2019, GWA's capital assets increased by $67.4 million. The increase is attributable to on-going major capital improvement projects associated with a 2011 Federal Court Order, the Authority's five-year Capital Improvement Program (CIP) and the Water Resources Master Plan to reflect long-term planning needs. One of the projects completed in FY2019 was the Agat-Santa Rita Wastewater Treatment Plant. This project will improve the collection and treatment of wastewater in order to protect public health and the environment. The ribbon cutting ceremony was held on June 28, 2019 and was open to the public as shown in the pictures below.
An independent audit was conducted by Deloitte & Touche LLP, resulting in a clean audit opinion. GWA has been classified as low risk auditee since FY2016. The Office of Public Accountability released GWA’s audited financial statements on May 15, 2020. More information can be found at our website at www.guamwaterworks.org.

Total water revenues increased by $1.6 million or about 2% while total wastewater revenues increased by $1.4 million or about 4% over the prior fiscal year. Hotel customers accounted for most of the increase in FY2019. Total operating expenses decreased by $1.7 million or about -2% over the prior fiscal year. In comparison to the previous fiscal year, contractual showed the largest increase at 18%, followed by salaries and wages at 13%. However such increases were offset by savings from water purchases which declined by about 28% compared to the prior fiscal year.

A comparative analysis of Revenues, Expenses and Changes in Percentages, FY2018 – FY2019, as well as FY2017 amounts, are illustrated in the Table below:

Challenges and Outlook

For FY2020, GWA Management will begin to implement its Five-Year Financial Plan (FY20-FY24) and Capital Improvement Program, which finally received action by the Public Utilities Commission in February of 2020. This five-year $342M plan is the third such plan GWA has issued. GWA has demonstrated improvement in performance through the successful implementation of Capital Projects planning and execution. With the completion of two 5-year plans and the recently-approvled CIP for FY2020-FY2024, the Authority has laid-out its on-going significant investments required by a 2011 Federal Court Order, regulatory mandates and CCU policy as reflected in the adoption of the 2018 Water Resource Master Plan. Although intended to be a wide-ranging program of improvements, our outlook will focus on:

- Completing 2011 Court Order projects (water storage reservoirs)
- Addressing upcoming regulatory compliance priorities in wastewater collection and treatment
- Reducing water losses and non-revenue water

Court Order Compliance

The 2011 Court Order established deadlines for completing outstanding projects that were identified in a previous Stipulated Order originally issued in 2003 and subsequently amended in 2004 and 2006. The CCU and Authority remain focused on meeting the requirements of the 2011 Federal Court Order and have nearly completed the execution of mandatory rehabilitation, repair and construction projects, with only one element remaining of the 93 compliance items – the repair, rehabilitation and replacement of water storage reservoirs. With GWAs recent and successful issuance of $134M in revenue bonds for capital projects financing, the remaining Court Order projects can now move forward.

Wastewater Collection

GWA is also addressing long-standing issues in its aged collection system through the Route 1 (Asan-Adelup-Hagatña) Sewer Line Improvements and Route 4 Sewer Line Improvements projects, which are slated for completion in 2020. In addition, GWA is almost done with the rehabilitation of 9-miles of sewer interceptor piping along Route 3/Road 9 originally installed in the late 1970s. A second phase of construction for the Route 1 project will begin in 2020, along with design projects addressing upgrades to sewer pump stations and force mains at critical locations within our wastewater collection system.

Wastewater Treatment - Secondary Upgrades

With the completion of a GWAs first new secondary wastewater treatment plant (WWTP) in Agat-Santa Rita in 2019, the Authority reached a major compliance milestone in addressing regulator requirements. For FY2020, GWA is moving quickly to continue that progress at its largest facility, the Northern District WWTP. Beginning in the fall of 2016, the Department of Defense (DOD), through the Office of Economic Adjustment (OEA), awarded the Authority grants totaling $173 million for construction of wastewater improvements related to the military build-up. In July of 2019, GWA issued a notice-to-proceed to the contractor selected for the construction of secondary treatment upgrades to the Northern District WWTP. The construction is underway and is on schedule for completion by December 2021.

Water Loss Control Program

The Authority continues to address the longstanding issue of Non-Revenue Water (NRW). According to the latest water audit figures, approximately 56% of water produced annually is not consumed or contributing to GWA’s revenue, due to either water losses (leaks, breaks) and unauthorized or unbilled consumption. GWA recognizes that NRW is a perennial and expensive challenge that compromises its financial integrity and sustainability. Therefore, GWA launched several initiatives intended to address water loss control on several levels, including satellite-based leak detection, pressure-zone realignment with the distribution system and improved system metering. Most recently, GWA engaged a water loss management consultant to pilot-test District Metered Areas (DMA). The resulting analysis and focused repair efforts within each DMA showed significant reductions in water loss. These encouraging results underpin GWA’s decision to incorporate several initiatives identified into a comprehensive Water Loss Control Program, which will provide for and document a long-term, sustainable and holistic approach to monitoring and managing water losses. As part of this program, a formal written Water Loss Control Plan is slated for completion in FY2020.

Metering Challenges

The Authority has effectively addressed the short-term impacts of a defective meter issue for a limited number of GWA’s residential meter inventory. The Authority has stepped up meter testing and replacement efforts, and has nearly completed phasing out the problematic meter model from its distribution system. GWA has seen recent rebounds in revenues due to the correction of the meter issue, and will focus in the coming year on improving metering infrastructure to provide enhanced customer experience with improved data and software availability.
